Some possible use cases for the application:

- discover quieter areas on campus (to be used for outdoor/ indoor studying /i.e. exam revision/ or relaxation for instance)
- find the areas with least polluted air (for running, training of any form or just for leisure activities in general)
- identify routes suitable for strolls (around Kelvingrove park for example, which is in close proximity to the university campus)
- help users who would like to meet new people in the cases when increased noise levels correspond to crowded venues
- could also be useful for Glasgow City Council and help them evaluate the technology and apply it to improve city life in general
- serve as a foundation for more similar university research/software engineering projects
- serve as a ground base and aid the further development of the innovative kit
