**Multiple visualization styles should be implemented/ tested. Some examples include - heat style map, general gradient map, color-coded blocks/ grid elements, etc. This is necessary so that user feedback can be used to improve the functionality of the mobile web application.**  
  
*This task is a functional requirement and will be split into sub-tasks if necessary.*

**User requirement:**  
  
*As a user, I want to be able to choose different visualization styles for the map in order to see correlations and data patterns better.*  
  
**Non-functional requirement:**  
  
*I need to learn how to select multiple map/visualization styles after 1 hour of using the system.*
