There is an issue with some functional components on the web server that use the jQuery UI library and they do not behave as expected, resulting in errors in the web console. Also, some "File Not Found" (error code 404) errors are generated for files associated with the jQuery UI lib. Those need to be resolved.

Fortunately, other people have encountered the same issue and someone has uploaded the UI library icons to their hosted server space and once I downloaded them, preserving the required hierarchy, everything started working.

Here is a resource link to the icon images:

- <http://theobjective.com/static/grappelli/jquery/ui/css/custom-theme/images/>

Below is my resource project structure and where the icon files are located:

- resources (storing all resource files)
  - external
    - jquery
      - images
        - icon\_X.png
        - ...
      - ...
    - ...

I also fixed the conflict between the two scripts by switching their places (took a while to figure out). It appears that *bootstrap.js* was conflicting with *jquery-ui.js* but once they were swapped the issues dissappeared:

```
<script src="${pageContext.request.contextPath}/resources/external/jquery/jquery-1.11.1.min.js"></script>
<script src="${pageContext.request.contextPath}/resources/external/bs/js/bootstrap.js"></script>
<script src="${pageContext.request.contextPath}/resources/external/jquery/jquery-ui.js"></scrip

<script type="text/javascript"
  src="https://maps.googleapis.com/maps/api/js?v=3.8&libraries=geometry,visualization&sen
<script src="${pageContext.request.contextPath}/resources/custom/map_styles.js"></script>
<script src="${pageContext.request.contextPath}/resources/custom/map.js"></script>
```
